COREMA®

Recycling & compounding in a single processing step

CHOOSE THE NUMBER ONE.
When recycling plastics from in-house or post consumer waste there are inevitably quality fluctuations which often limit the amount of recyclate in the end product. The solution lies in systematic *upcycling*, i.e. the combination of recycling and compounding. This enables you to optimise the property profile with precision according to your requirements.

COREMA® brings together all the benefits of recycling and compounding in one system for the first time. The proven, robust EREMA technology is used to turn recycling raw material (e.g. PP nonwoven, PE edge trim, PA fibres etc.) into a filtered melt which then goes directly to a co-rotating twin-screw extruder from Coperion. With its excellent mixing and gas removal properties, this part of the system can handle all compounding tasks.

Besides the dosing of a wide variety of additives, fillers and reinforcing agents can be admixed in doses that are higher than those previously possible with EREMA recycling systems. The result is customised plastic recyclate for high-quality applications.

**ecoSAVE®**
- Lower specific energy requirements thanks to a complete package featuring design and process engineering measures
- Lower production costs through optimised control technology and high-quality, energy-efficient components such as high-performance motors
- Additionally, the practical **energy display** on your operating panel gives you a constant overview of energy consumption at all times, thus enabling you to take specific measures to optimise consumption
- Reduced CO₂ emissions – an important contribution to environmental protection
Technical benefits

- Possible to use a wide range of recycling raw materials flexibly thanks to the patented large EREMA cutter/compactor and Counter Current technology
- Minimum thermal stress through short, defined dwell times and direct dosing of the melt in the twin-screw-compounding-extruder
- Proven EREMA degassing technology with the EREMA cutter/compactor and extruder degassing
- Proven, robust EREMA technology to provide filtered melt
- Central user interface to control the whole system

Economic benefits

- Increased value added thanks to the use of inexpensive raw materials (e.g. PP nonwoven, PE edge trim, PA fibres etc.)
- Modular system concept offers optimum adjustment to the respective application
- Very low operating costs and minimal specific energy costs through direct dosing of the filtered melt and processing in a single step without intermediate cooling
- Reliable production thanks to Counter Current technology and robust design
- Compact, space-saving design
- ecoSAVE® reduces energy consumption by up to 10% as well as production costs and CO₂ emissions as a result

How it works

Feeding is automatic according to customer requirements. In the patented cutter/compactor the material is cut, mixed, heated, dried, degassed, densified and buffered.

Next, the tangentially connected extruder is filled continuously with hot, pre-compacted material. In the extruder screw the material is plasticised, homogenised and then cleaned in the fully automatic self-cleaning filter.

The prepared and cleaned melt then goes via the melt pump directly to the co-rotating, self-cleaning twin-screw extruder from Coperion. With its excellent mixing and gas removal properties, this flexible part of the system can handle all compounding tasks.

Besides the dosing of a wide variety of additives, high amounts of fillers and reinforcing agents can be admixed. In the degassing zone the compounded melt is degassed and moves to the respective tool (e.g. EREMA hot die face pelletising system).

Centrepiece cutter/compactor:

The dynamically controlled preconditioning unit. For an end product in consistently high quality.
Upcycling with COREMA®

**EREMA® Recycling**
- **EREMA cutter/compactor**: cutting, mixing, preheating, drying, degassing, compacting, buffering
- **EREMA recycling extruder**: plasticising, homogenising
- **EREMA melt filter**: fully automatic and self-cleaning

**EREMA® Compounding**
- **Coperion twin-screw compounding extruder**: admixing of additives, fillers and reinforcing agents e.g. up to 80% CaCO₃, 50% glass fibre, colour masterbatch
- **Degassing**

**EREMA® Pelletising**
- **EREMA pelletising systems**: for consistent pellet quality

Examples of raw recycling materials:
- PE film with paper content
- PP nonwoven
- PE, PP film (printed)

Examples of additives, fillers and reinforcing agents suitable for admixing:
- Colour masterbatch, CaCO₃, Glass fibre

Customised plastic recyclate

One control system for the entire plant

Technical data COREMA®

COREMA® systems can be configured for outputs ranging from 300 kg/h to 4,000 kg/h in a wide variety of versions according to the application and specification of the recyclate.
